

# DeBooks

GIFT PACKAGES SETTLED ON THE BLOCKCHAIN

# PROBLEM

The tourism sector in rural areas usually is the last one in getting access to the last technologies. It is also highly dependant on intermediaries (as online agencies) which often apply abusive commissions to them and promote unhealthy competition at local level.

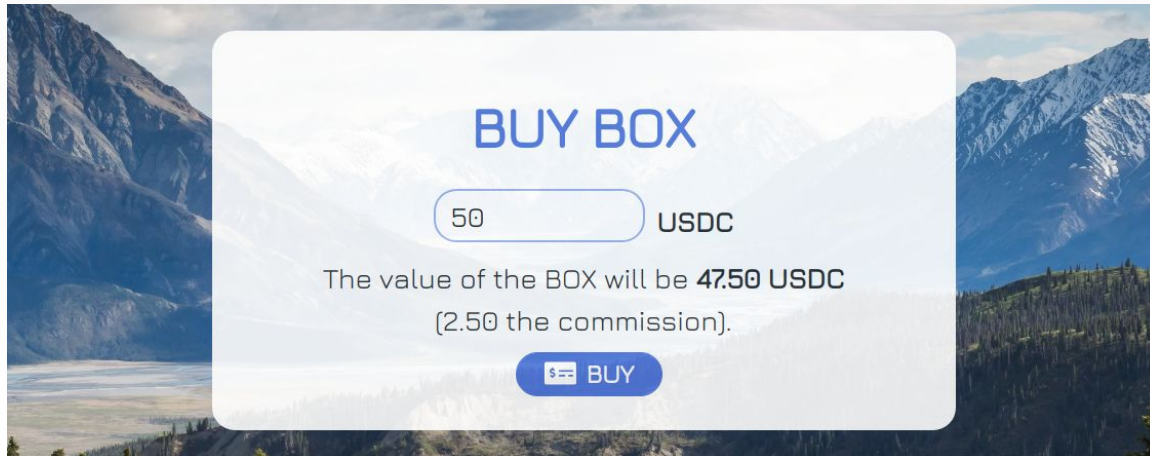

# TARGET MARKET

Our target collaborators are small and medium establishments in rural areas, only in Spain there are more than 11.000 rural houses.

Our target customers are cryptocurrency users/holders. The estimated number of global crypto users has passed 100 million.

# SOLUTION

Debooks is a platform to sell gift packages in the form of NFTs on the Fantom blockchain, redeemable for stays and/or activities in real establishments.

The establishments can easily offer their plans directly on the platform to the customers without commissions for their reservations or intermediaries. The price is set in USDC, a stablecoin tied to dollars.

**Rafting + dinner for 2**  
DeBooks \*\*\*\*\*  
Price: 150 USDC Duration: 1  
Occupants: 2

# MOTIVATION

We want to help bringing the latest technologies to rural areas to strengthen their economy and independence, and encourage local collaboration.

# BUSINESS MODEL

Everytime a customer purchases a gift package (BOX) a 5% of the value is charged as a fee.

We have create a token called Debooks which represents the right to a percentage of all the fees collected on Debooks. To get those profits the holders of Debooks have to stake their tokens on the platform.

The distribution of Debooks tokens will stimulate the use of the platform among the community and potential hosts.

# ROADMAP

Debooks dApp is being tested in the testnet of Fantom to ensure the security and functionality.

We plan to launch it into the mainnet in the following months.

We already have establishments waiting to offer their plans in our platform and the expected response from the network users is quite favorable.

# TEAM

We are two developers working in the project, a front-end and a back-end. Together we are able to work fast and efficiently. Although we are looking to expand our team soon.

We started in the tourism sector two years ago when we started to develop a PMS from scratch. We are active members of the crypto community and we see the great potential of this new technology for the tourism.

# COMPETITION

We offer no commissions to the hosts, compared to up to 40% that some of our competitors charge for reservation. Moreover, our packages are the only ones that can be purchased directly with cryptocurrencies to the hosts in an easy, transparent and secure way.

# NEXT STEPS

- Audit the smart contracts of the dApp to ensure their functionality and security.
- Launch the dApp into the mainnet of Fantom.
- Attract more collaborating establishments and introduce them in the world of cryptocurrencies.
- Publicize the project in the cryptocurrency ecosystem to potential customers.
- Find new workers for our team.
